1. HTML/HTML5 Brief explanation 4 marks

   HTML (HyperText Markup Language) is the standard language used to create and structure content on the web. It uses tags like `<p>`, `<h1>`, `<a>`, and `<img>` to define paragraphs, headings, links, and images.

   HTML5 is the latest version of HTML. It introduces new semantic elements such as `<header>`, `<footer>`, `<article>`, and `<section>` to improve readability and accessibility. HTML5 also supports multimedia content like video and audio without needing plugins.

2. HTML/HTML5 Brief explanation 4 marks

   HTML provides the basic structure of a web page by using various tags. It defines elements like headings (`<h1>` to `<h6>`), paragraphs (`<p>`), images (`<img>`), and lists (`<ul>`, `<ol>`).

   HTML5 enhances the functionality of traditional HTML by introducing features like native video/audio support (`<video>`, `<audio>`), form enhancements (like `<input type="date">`), and APIs for drag-and-drop, local storage, and geolocation. It also improves browser compatibility and performance.

3. Html/html5 2 marks

   HTML is the standard language for creating web pages. HTML5 is its latest version, which adds new semantic tags, multimedia support, and modern web features for better user experience and performance.

4. HTML/HTML5 Brief explanation 4 marks

   HTML is used to create and structure the content of web pages using elements like headings, paragraphs, links, and images. It provides the foundation for all websites.

   HTML5, the modern version of HTML, introduces semantic elements such as `<main>`, `<nav>`, `<article>`, and `<section>`, making the structure more meaningful. It also supports built-in form validation, multimedia elements, and APIs like local storage and canvas for graphics.

5. Look at some code and answer a question 3 marks

   The `<nav>` tag is a semantic HTML5 element used to define navigation links. In this example, it wraps the main navigation menu of the website, which is the correct usage. It helps search engines and assistive technologies understand that this section contains important links for navigation.

6. Write html and flex layout 10 marks

   html

```
<!-- Header with Flex -->
<header class="header">
  <a href="#" class="logo">Juzail</a>
  <nav class="navbar">
    <a href="#about">About</a>
```

```
  <a href="#projects">Projects</a>
  <a href="#contact">Contact</a>
 </nav>
</header>

<!-- Flex container with text and image -->
<div class="container">
 <div class="intro-text">
  <h1>Hello, I'm <span class="highlight">Juzail</span></h1>
  <p class="intro-description">Frontend developer with a passion for responsive design.</p>
 </div>
 <div class="intro-image">
  <img src="me.jpg" alt="Profile Picture" class="profile-picture">
 </div>
</div>
```

Css

```
.container {
 display: flex;
 flex-direction: row;
 align-items: center;
 justify-content: center;
}
```

7. CSS layouts 15 marks responsive

```
@media (max-width: 768px) {
 .container {
  flex-direction: column;
  padding: 60px 20px;
 }

 .intro-text {
  padding-right: 0;
  text-align: center;
 }

 .intro-image {
  margin-top: 30px;
 }

 .header {
  flex-direction: column;
  align-items: flex-start;
  padding: 15px 5%;
 }

 .navbar {
  display: flex;
  flex-direction: column;
  margin-top: 10px;
```

```
  }

  .navbar a {
    margin: 5px 0;
  }
}
```

8. Screenshot of web page and some code and write css 7 marks

```
.profile-picture {
  width: 100%;
  max-width: 300px;
  border-radius: 8px;
  object-fit: cover;
  transition: transform 0.3s ease;
}

.profile-picture:hover {
  transform: scale(1.05);
}
```

9. Circle on your portfolio code where you used… 9 x 4 = 36 marks

10. Explanations and some css with gaps, you fill in the gaps (can be several lines) 4, 4, 3, 4 total 15 marks

c. 3 marks — Responsive design using media query

```css
@media (max-width: 768px) {
  .container {
    flex-direction: column; /* Stack elements vertically on small screen */
  }
}
```

d. 4 marks — Transition and scale on hover

```css
.profile-picture {
  transition: transform 0.3s ease;
}

.profile-picture:hover {
  transform: scale(1.05); /* Slight zoom on hover */
}
```

✅ 10. Fill-in-the-Gaps CSS Explanation Questions (15 marks total)

Here are possible gap-fill examples based on your style:

a. 4 marks — Hover effect on navigation

css Copy Edit

```css
.navbar a:hover {
  color: #ff6347; /* changes to tomato on hover */
}
```

b. 4 marks — Flex layout with centered content

css Copy Edit

```css
.container {
  display: flex;
  justify-content: center; /* center horizontally */
  align-items: center;     /* center vertically */
}
```

c. 3 marks — Responsive design using media query

css Copy Edit

```css
@media (max-width: 768px) {
  .container {
    flex-direction: column; /* Stack elements vertically on small screen */
  }
}
```
