

Bootstrap: Online Shopping Interface using Bootstrap

You are tasked with creating an online shopping interface prototype. Use Bootstrap elements to design a page showcasing products, each represented as a Bootstrap card. Implement buttons and a grid layout to simulate product categories and navigation.

1. Create a new HTML file named **online_shopping.html**.
2. Implement the following tasks:
 - a. Set-up Bootstrap: Include the necessary Bootstrap CDN links in your HTML file's <head> section.
 - b. Design header section using Jumbotron with description.
 - c. Add Product Categories to Jumbotron using Bootstrap Buttons: Create buttons representing product categories (e.g., Electronics, Clothing, Books).
 - d. Display Products as Bootstrap Cards: Design each product as a Bootstrap card with an image, title, and brief description. Create multiple cards to simulate different products within each category.
 - e. Implement Grid Layout for Product Display: Utilize Bootstrap's grid system to arrange the cards in a structured layout as shown below.
 - f. Footer: Create the footer of the page using the bootstrap footer
 - g. Finalization and Testing: Save the file and open it in a web browser to view the online shopping interface. Ensure buttons for categories are clickable and switch between different sets of product cards.
